Company Introduction:

Monir Sons is the largest drinking water cooler and industrial process chiller manufacturer in Pakistan supplying its products and services nationwide. Formed in 19's by the amalgamation of three companies specialising in chilled technology, Monir Sons has a proud heritage that dates back to 19's, with the manufacture of packaged water chiller units.

Today the company offers a complete range of products including botte water coolers, watercoolers, point of use water coolers, mains connected drinking water fountains, industrial process chillers, installation, and a comprehensive after-sales service including sanitization, repair and a broad range of accessories designed to cater for any clients needs.

Over the last 10 years Monir Sons has exported to New Zealand, Taiwan, Singapore, Mauritius, United Arab Emirates, Thailand, United Kingdom, Qatar. The company now enjoys an enviable reputation for the design and development of "world class" water chilling appliances and continues to pave the way for future growth and development.

With its state-of-the-art facilities in Karachi, Monir Sons is now able to manufacture 10,000 products every year, employing over thirty employees.

ICEBERG DRINKING WATER COOLER - FEATURES:

Proudly Pakistan Made.

Monir Son's Chillers are world class when it comes to performance and quality. Made in Pakistan, all of our Cooler's Industrial Process Chillers are constructed using quality workmanship and componentry. our Cooler prides itself in thoroughly testing all chillers prior to dispatch to ensure performance to 45°C ambient, utilising its own unique testing room.

- A common complaint for water cooler is the leakage or damage of water tank and said complaint resolved through storage type water tank used in this unit.
- The water tank sheet of SS-304 to save the water tank from Jung and other atmosphere effects.
- Resultantly the durability of tank increased substantially.
- Outer casing of the unit made up from G.I. Sheet for durability point of view, however the same will be made of from SS if requisite.
- The unit specially designed to provide continues output in the hot summer days without any obstruction.
- The unit designed keeping in view the complaint of the customer that the outer body of water cooler damaged due to Jung in very short period. And the people not properly used the water cooler at public or working place.
- This cooler design package is horizontal and water chiller can easily installed at any upper level at angle iron stand and can easily manage the free year and water supply line as per your desire. Resultantly the unit will out reach from the general public and will save from the faults due to human interference and accordingly the life of the unit increased comparatively.
- The facility of specific designing, fabrication and material as per your requirement/capacity is available.
- The heat condensing/exertion components is fitted/installed with a sufficient and same safe the component from damage by overheating.
- All models designed on single phase (220 Volts) electricity connection.
- To save the electricity at your desired set temperature the unit goes at standby mode.
- Due to at least trouble shooting the unit required minimum maintenance.
- We are proud to be recognized as Pakistan's largest and leading drinking water cooler and industrial process chiller's manufacturer.
