KAN Energy offers grid-tied solar systems with net metering for our residential as well as commercial customers. Net metering is an advanced and beneficial system of monitoring the amount of energy produced by the grid-tied solar system and the amount of energy used by the site. This type of system has proved to be economically beneficial for the customers because WAPDA buys the electricity produced by it at the same rate as they sell electricity back to the site owner.

Net metering is getting famous in many parts of Pakistan due to its advantages. The residential customers and private investors are also using this solar system to generate their renewable energy and get financial compensation for the solar energy.
