KAN Energy is also offering the most durable off-grid solar system when the grid is unavailable or expensive. Off-grid solar system works by generating electricity from solar panels and using it to charge a solar power battery. The electricity produced is then used to run home or business appliances.

This type of solar system is proving to be quite beneficial because it saves electricity in a solar battery. Which then runs the appliances with solar energy even at night or during times when there is less sun exposure.
